Problem Set 1: Latex Section

Zifeng Li

September 13, 2023

My aim for this course is to acquire skills and knowledge that I anticipate will be valuable in my future career. While I've had some experience with Java and Python in previous courses, I find that I still need to consult online resources for specific functions if I haven't used these languages recently. Upon completing my undergraduate degree, my next step is to pursue graduate studies.

The Figure for this assignment is on the next page.

My github account name is: saladsushi
